

Components

Policy Center – Set Expectations	
<p>Converts management expectations into actionable, measurable tasks—helping the organization ensure process consistency while rapidly adapting to changing market trends, regulatory environments, and customer demands.</p>	<ul style="list-style-type: none"> Policy drives expected behavior throughout the SDLC, promoting predictable outcomes. Delivers an actionable set of tasks that are measurable through completion. Provides the control needed to continuously improve the process of delivering business applications.
Process Center – Govern Workflow	
<p>A flexible and configurable engine that drives business processes—enforcing policy and driving defined tasks to completion.</p>	<ul style="list-style-type: none"> Ingrains the expected behavior across the SDLC. Ensures the process is executed in the context of a business outcome. Standardizes task execution across environments.
Project Center – Manage Tasks	
<p>Delivers advanced task management that increases development teams' work quality and efficiency.</p>	<ul style="list-style-type: none"> Assists managers to plan projects, track progress of those projects, and analyze completed projects in order to continuously improve SDLC processes. Provides developers with an exact plan of attack. They know the overall project goal, their own tasks to complete to help achieve that goal, and the deadline for each task. Provides QA teams with development progress and the implementation status of project artifacts (requirements, tasks, defects/enhancements) so they know what's ready for testing.
Test Center – Achieve Quality	
<p>Connects Parasoft's award-winning products (Parasoft Jtest, Parasoft C++test, Parasoft SOAtest, and so on) with the Parasoft Concerto platform for end-to-end quality and visibility.</p>	<ul style="list-style-type: none"> Generates, assigns/distributes, and facilitates specific tasks for ensuring functionality, security, reliability, performance, and compliance. Accelerates schedules and reduces costs through automation, defect prevention, and a continuous quality process. Automatically correlates requirements, code, and tests in order to identify change impacts—reducing the risks associated with evolving applications.
Report Center – Monitor Compliance	
<p>A decision support system that provides maximum visibility into and control of the software development process.</p>	<ul style="list-style-type: none"> Supports a repository of software development metrics that enable process improvement. Combines and delivers development data from multiple sources to allow for objective decision-making by various user roles. Helps teams deliver projects in less time, with existing resources, by rapidly identifying specific problems and problem areas to reduce debugging cycles.

Simple Seamless Integration

Parasoft Concerto is designed to seamlessly integrate into any development environment, development process, and development language. It can be fully integrated into your current environment within hours.

Even if one development group is using Agile or Scrum, another waterfall, and others somewhere in between (hybrid), Parasoft Concerto's flexible interface and robust functionality ensure that each group's unique demands are satisfied.
